

Why data backup is so important to the US Public Sector

The best offense is a good defense when ensuring your data is protected. Adopting a resilient backup solution that integrates data protection and cybersecurity is the most foolproof method to defend the US public sector against such attacks and keep critical operating systems up and running. Performing regular full-image backups and storing them on-site and a secure off-site location are crucial steps to ensure your organization recovers quickly. In fact, several compliance frameworks like NIST 800-171, CMMC, and CJIS require that backups are protected, with offsite being the perfect option.

Cyberattacks are not the only way data is lost or corrupted. And it's not just the loss of data; it's the cost of downtime, database reconstruction, and, in the worst-case scenario, the impact on your ability to conduct business if the data is unrecoverable.

The US public sector must incorporate a Defense-in-Depth strategy, including the right backup solution that is highly secure, easy to manage, provides reliable replications, maintains compliance standards, and has zero impact on performance. [Acronis SCS Cyber Protect](#) is that solution and your organization's best defense.

Ways organizations lose their data

Implement 3-2-1 Rule

Legal consequences of data loss

What to look for in a backup solution?

It should provide maximum ease of use and compatibility across all the mediums and platforms you need and use.

When it comes to backup, Acronis SCS provides two options

There are many ways for your agency to create backups of important data, and you should use multiple methods to ensure your files are always available when needed.

- 1** **Acronis SCS Cyber Protect** enables your team to create complete backups with as few as three mouse clicks. With our award-winning software, you can choose to backup entire systems or limit backups to mission-critical data and files.
- 2** In need of an offline and certified backup solution for your more sensitive environments? Check out our **Acronis SCS Cyber Backup 12.5 Hardened Edition**, the first and only full disk image backup and disaster recovery point solution certified by the DoDIN APL.

If you're concerned about data loss and looking to minimize your organization's exposure to cyberattacks, protect your systems and data no matter what happens.
